Final Quiz
Organism causing Chancroid
E. Coli 0157 is implicated in this renal condition
Rash of Lyme disease
One of two common infectious triggers of erythema multiforme
Patient 56 yo c/o fatigue, stomach fullness, malaise and abdominal pain. Peripheral smear shows “cytoplasmic projection”

What is it?
The most common visual field defect in patients with pituitary adenoma
Medication shown to decrease neurologic sequelae in SAH
Spinal cord lesion with ipsilateral weakness and contralateral loss of pain and pain sensation
II 400Q

Dementia, gait apraxia and urinary incontinence

Go To Single Quiz
Antibody associated with Eaton-Lambert syndrome
Philadelphia chromosome is characteristic of this illness
IgM autoimmune anemia associated with this lung infection
A blood test to differentiate CML from leukemoid reaction
Organism noted for causing aplastic anemia in sickle cell patient
Patient from Dominican Republic presents with anemia, occasional diarrhea, weight loss and skin disorders. What is it?
High anion gap acidosis with oxalate stones
Peripheral smear finding in lead poisoning
Corneal microdeposition, decreased T3 level and increased digoxin level
Patient intoxicated in ER, AG 14 and serum Osm 295. What is it?
Treatment of choice for methanol and antifreeze intoxication

(Keep beer drip for yourself)

Final Quiz
Herpes simplex of the external auditory canal and Bell’s palsy
VII 400Q

Hereditary hemorrhagic telangectasia
Hypogonadism, anosmia and color blindness
Bilateral Bell’s palsy, uveitis and parotid enlargement
Post cath development of mottled lower extremities and blue toes
Deficiency of this element causes cardiomyopathy.
Treatment of choice for A. Fib with accessory pathway and wide complex tachycardia
This parasitic infection causes pulmonary HTN
Altered mental status and cranial nerve palsy seen in acute liver failure are due to this complication.
While in Starbuck’s café, you order “café au lait” You notice the women behind the counter has a large café-au-lait spot on her neck. You also noticed axillary nodes freckling. Which chromosome is affected?
IX 200Q

ABG: 7.29 / 80 / 85 / 41

What is it?
ABG: 7.10 / 32 / 85 / 6
Na: 138, Cl: 97
What is it?
IX 600Q

ABG: 7.23 / 61 / 80 / 23

What is it?
Renal tubular acidosis and hyperK. What is it?
Inherited disorder with hypertension, hypoK, alkalosis and negligible renin/aldosterone secretion
What is the full name of Boehringer Ingelheim drug rep sponsoring Jeopardy tonight
Name three states that border Ohio
The land we call Ohio today was part of the Northwest Territory that the United States won by defeating what nation in the Revolutionary War?
What is the brand name for Tiotropium?
Gold Guidelines Therapy recommendation for Stage II Moderate COPD
FINAL QUIZ
Enjoy reading and have fun !!!
Three dishwashers started working at 8:30 am. By 1:00 pm workers were involved in washing the dishes since there was a huge banquet the previous night, leaving lots of dirty dishes.

The dishwashing procedures consisted of:
1- Pre-rinsing the dirty dishes by hand in a water tank.
2- Washing the pre-rinsed dishes in the automatic dishwasher.
3- Draining the washed dishes and placing them in cupboards.

Starting around 2:00 pm, workers began complaining of such symptoms as headaches and dizziness. By 2:30 pm, all workers showed the same symptoms. Two seriously affected workers were taken to a local hospital by ambulance and the other nine workers were also eventually taken to the hospital for treatment.

On arrival at the ER is a 54 y/o woman- her last memory was washing some asparagus off of a plate. Her next memory was riding to ER.

PMHX: PUD, fibromyalgia
Meds: Unknown anxiolytic, estrogen
FmHx: Unknown
SHx: Divorced. Lives with her boyfriend in a trailer park. Smokes 3 packs/cigarettes/day, drinks six-pack of beer daily.
ROS: Positives for headaches, dizziness, weakness, nausea, difficulty concentrating, dyspnea and visual changes.

PE: BP 126/91, HR 86, R 30, T 37.1
   MS: AAAO x 1(name), speech without dysarthria. 2/3 recall at 5 min.
   Abdomen: +BS, soft, nontender.
   Neuro: CN strongly intact, reflexes equal and symmetrical.
   Motor: Full strength throughout with normal muscle tone and bulk.
   Sensory: Unremarkable.
   ABG: 7.41/30/370 with 100% FiO2, carboxyhemoglobin level is 26%

What is your diagnosis:
1- Allergic reaction to dishwasher detergent
2- Carbon monoxide poisoning
3- Influenza A outbreak
4- Meningococcemia
5- Asthma
Congratulations
Congratulations
